

Computer Technology

Module Guide

- Which of the following is a program or piece of computer code that is loaded on your computer with the intent of damaging your system?
A. port
B. disease
C. stylus
D. virus
- What type of card is a printed circuit board that connects internally to the computer and adds various functionalities?
A. transistor
B. optical
C. memory
D. expansion
- Which of the following ports allows for daisy-chaining devices and supports hot plugging technology?
A. USB
B. serial
C. unidirectional
D. parallel
- What technology enables the computer to automatically configure I/O devices and expansion cards?
A. plug and play
B. hot plugging
C. user-friendly
D. graphical user interface
- Which of the following deals with programs or instructions that make the computer operate or perform useful work?
A. hardware
B. peripherals
C. software
D. devices
- What is considered to be one of the greatest breakthroughs in the development of computer input devices?
A. keyboard
B. monitor
C. mouse
D. speakers
- Which of the following systems is the most important software program that runs on a computer?
A. input/output system
B. operating system
C. processing system
D. expansion system
- What type of device displays computer information in one form or another?
A. ergonomic
B. output
C. input
D. technical
- What is a global network connecting millions of computers together?
A. Internet
B. Intranet
C. LAN
D. DSL
- What type of circuit is extremely small, is made up of electronic components, and was a major development in the advancement of computer technology?
A. electronic
B. ballistic
C. hardware
D. integrated
